<u>Matrix CTF – Story</u>

In a world where reality is nothing more than electrical signals interpreted by your brain, a group of hackers has discovered a terrifying truth: our perceived reality is a simulation controlled by machines. These hackers, led by the enigmatic Morpheus, have been searching for "The One" - a person capable of manipulating the very fabric of this simulated reality.

You are a skilled programmer who has always felt that something was... off about the world. Strange glitches in your periphery, déjà vu that feels too real to ignore. Your search for answers has led you to make a choice: <u>Set Scene</u>, *"wake up in your bed and believe what what ever you want to believe"* or *"stay in wonder land and see how deep the rabbit hole goes"* (<u>"Choose The Pill".</u>)

{the ctf is when you choose the red pill, you need to go down the rabbit hole}

Find the protocols, beat the Matrix!
